

__(add date)__ PEDIATRIC SIMULATION SIGN-UP

Sign-up to attend this session outside of your normal workday (either before/after a shift or on a day off)

Sessions will involve **four common pediatric scenarios** programmed into a computer.

Simulations will:

- Mimic clinical care and facilitate training in ways that cannot be accomplished in real patient care
- Occur in the resuscitation bay using the equipment/resources/policies in your department. NOTE: If a patient comes in requiring the resuscitation bay we will rapidly break down equipment.
- Will present clinical findings (pulses, breath sounds, heart sounds), be connected to a monitor displaying vital signs and a computer displaying the electronic medical record (labs, imaging).

Pediatric emergency medicine RNs and MDs will facilitate debriefings after each simulation.

Teams will be composed of two medical providers (MD, PA, &/or APRN), three-four nurses, and two medical support staff members (medic, tech, &/or Respiratory Therapist).
